

EXPERIENCE

Android Engineer **Paradox Cat GmbH** **Feb 2025 – Present**

- Working with real-time graphics and Human Machine Interaction technologies.
- Ensuring high code quality through unit testing.
- Developed a media player app from scratch in 2 weeks, ensuring smooth playback and seamless UI/UX.

Software Developer **Huawei** **Nov 2024 – Jan 2025**

- Developed 20+ custom services using JavaScript to manage millions of alarms, rules and work orders for the entire telecommunications infrastructure of 2 countries.
- Automated 10+ data integration tasks by writing complex SQL queries.
- Optimized workflows, improved efficiency and resolved dozens of errors for the internal systems.
- Connected to virtual machines and performed Linux scripts to support system operations.

Android Developer **mReady** **Jul 2023 – Sep 2024**

- Implemented 4 user-centered features that enhanced UX, accessibility and interaction with analytics.
- Monitored user interactions with Firebase Analytics and applied Lint checks, reducing bugs by 15%.
- Developed 50% of a project's codebase from scratch, covering 42 screens, API integration, business logic implementation and thorough documentation.
- Integrated 50+ reusable components in Jetpack Compose to streamline development.
- Optimized API interactions, reducing load times by 20%.
- Delivered 200+ features and resolved 100+ bugs across 3 major Android projects, achieving a 95% defect-free rate in final releases.
- Estimated 100+ timelines and deliverables with consistent accuracy across multiple project phases.
- Mentored 2 interns for 2 months, guiding the implementation of 3 unique features in their internship projects. Conducted code reviews to help them maintain high coding standards.

PROJECTS

- **Emulair:** Android emulation frontend with a gaming console-inspired UI. Currently composing the interface by customizing 4 core navigation functionalities: scroll, press, hover and focus. Created using Kotlin, Jetpack Compose, SQLite.
- **Rayvue:** Android app which informs users about games they are about to download. Users can read reviews posted by experts, stay informed about any malicious practices and journal their thoughts about any particular video game. Created using Kotlin, Jetpack Compose, Firebase.
- **Games Manager:** Java app for managing a collection of games, user reviews and developer accounts. Uses 10 advanced programming concepts. Made using Java, MySQL, JDBC.

SKILLS

- **Core Competencies:** Kotlin, Java, Jetpack Compose, Firebase, Firebase Analytics, MVVM Architecture, Clean Architecture, Multi-Module Applications, Hilt, Dagger, REST APIs, Gradle, Material Design, Git, Azure DevOps, Object-Oriented Programming, Async Programming.
- **Supporting Skills:** Kotlin Coroutines, TypeScript, Room, LiveData, Google APIs, GitHub Actions, Reactive Programming, SOLID Principles, Clean Code, Scrum Framework, Lint, Checkstyle.
- **Languages:** Native Romanian, C1-C2 English.

EDUCATION

University of Bucharest **Oct 2024 – Jul 2026**

- Master of Business Administration, UNESCO Program.

University of Bucharest **Oct 2021 – Sep 2024**

- Bachelor of Science in Computer Science.

AWARDS

- **3rd Place - Smarthack** (issued by Adobe): Co-developed the number one most efficient algorithm of the competition, earning the best score among all other submissions. Combined with a front-end demonstrating the algorithm in real time and a solid jury presentation, the team earned the competition's Innovation Prize.
- **Runner up - Nothing Community Edition Project Stage 2** (issued by Nothing Technology): Created 4 wallpapers to be shipped on the upcoming Nothing Phone (2a) Plus Community Edition by analyzing the winner of the previous stage and how the designs would fit in the Nothing ecosystem.
- **Runner up - MGDG Game Jam** (issued by My GameDev Pal): Drew graphics and designed gameplay for a 2D video game created in just 2 weeks, based on the jam's theme.
- **1st Place - Student Scientific Symposium** (issued by "Lower Danube" University of Galati): Developed an efficient ray tracing algorithm, in pure TypeScript, which rendered a complex scene containing mirrors and light reflections. Concluded with a standout jury presentation.
